Copyright
- Buying something should entitle you to all (and the highest possible quality) versions of the item, and if the various formats are not provided explicitly by the copyright holder, the consumer should have to right to be able to obtain it on their own from any source.
- The accessibility of music, whether free, paid, or compensation-per-stream, should be determined by the producer of the music and cannot be captured in one general law by the federal government.
- Youtube videos with challenged copyright claims should be left up and monetized until the claim process has been completed.
- Hardware products sold to users should be accessible to DIY types for repairs and customization.
- With technology openly available and free to torrent, it is my opinion that everyone has an inherent right to common software and therefore all software should be free and open source to individuals.

Private Information Ownership
- It is neither legal nor ethical to post lewd or pornographic images of someone on a site without their knowledge or consent. That photo was (likely) sent to an individual on trust and to publish it is a serious breach of ethics. Many states have drawn up legislation concerning non-consensual pornography, but it should have more serious repercussions across the board.
- Once a picture has been sent by user A and received by user B, it is no longer ethical for Snapchat to preserve the image data within their systems.
- Privacy Law should be amended to require app developers to clarify on what they might obtain as feedback from users and offer users options to quit any processes in which developers secretly collect data from users.
- Data mining should be utilized by companies because it provides economic benefits to both the consumer and corporation.
- The landscape of privacy is changing dramatically with the introduction of wearable technology, just as with the previous waves of the PC and the smartphone, the reduced privacy should become the norm with its advances.

Governmental Access to Private Information
- With technology constantly advancing, the personal and national safety, virtual privacy, and individual, physical privacy of US citizens should be considered when discussing how much freedom we are willing to forgo to the United States government.
- The NSA is wrongfully and unethically appropriating information that is private to individuals.
- The NSA should be able to bulk collect metadata of people's personal information.

Automation and Employment
- In order to deal with rising unemployment resulting from increasing automation of jobs, the government should takes steps to reduce economic stress on the unemployed such that that they don't have to live in misery and poverty.

- Developing automation to replace humans in the work place would be beneficial to society.
- The rise in unemployment due to automation is a progression that will be beneficial in the long run for the advancement of society.

AI
- Laws should be amended to allow self-driving cars on all roads, subject to passing safety standards.
- Self driving cars that do not allow for driver intervention must hold the manufacturer liable if they are responsible for an accident.
- The human race could meet its demise through the study of Artificial Intelligence!
- Because of the lack of human discretion of programmed machines, robotic doctors should only provide medical assistance to doctors rather than being the main practitioner.

Whistleblowing/Hacktivism
- Information leakers and whistleblowers should be provided amnesty and protection, even when they are breaking nondisclosure agreements or laws by coming forward.
- Whistleblowers are breaking the law, but the information that they leak should not be kept secret in the first place.
- The use of technology and hacking to promote political agendas is ethical, even if the hackers gain access to protected systems, and criminal charges for "Hacktivism" are in violation of humanities right to free speech.
- Even though hacking has a negative connotation, hacking can prove to be beneficial by exploiting security flaws and potentially bettering technology.
- It is my opinion that Bruce Wayne's choice to use sonar create a temporary network that monitored every resident of Gotham was an ethical one because he did it to save lives, he separated himself from the machine by giving Fox full control, and he destroyed the machine once the joker was located.

Governmental Regulation/Censorship
- The government should not be allowed to ban or censor material on the internet because it violates basic constitutional rights in addition to putting our other basic rights at risk.
- Though the Chinese government has some legitimate reasons behind its Great Firewall, the current level of censorship violates the interest of the people for the interests of the government, and it requires improvements that are in the best interest of the Chinese public as a whole.
- Different countries have different control over social media websites and some countries are not allowed access to social media at all. Policing of social media and its content should be up to the companies, not the government: each company should have higher standards for what should be posted and what should be shared.
- Video games should not be censored based on violence.

Technology and Education
- A technologically based education is essential to function in today's society.
- Our society needs to include the internet as part of our daily lives, and establish social constructs to deal with the problems the internet introduces.
- It is my opinion that if a publicly available school wants to require technology (such as ipads, laptops, etc.), then it is not the responsibility of the students to acquire the technology themselves, the school should provide them with whatever they need.
- Establishing an online voting system in the United States will increase voter turnout and improve the quality of our democracy.

Access to the Internet
- Net neutrality should be preserved as per the FCC's Open Internet Order proposal.
- Companies should not be allowed to set data usage or speed limitations on customers through the use of throttling and data caps.
- Regional IP address blocking should be criminalized to facilitate freedom of speech and globalization.

Global Issues
- Globalization of technology is beneficial as it connects the world into one entity, socially and politically and ultimately opening up the workforce to new opportunities.
- Widespread adoption of a cryptocurrency or a set of cryptocurrencies would benefit the individual user and the global economy as a whole, as we would be less dependent on individual governments and their actions but rather the economy would be centered around trade between individuals.
- Genetically Modified Foods should be deregulated and encouraged to help eliminate hunger and starvation in order to support the ever-expanding human population.

Responsibility to Customers
- Black hat SEO should be illegal as deceptively boost SEO rankings is not only unethical, but the client may be severely penalized for tactics that they may not have known were utilized prior to receiving punishment.
- Game studios should refrain from exploiting users with the "Pay-to-Play" model and aggressive DLC policies because they take advantage of gamers and hurt creative incentive in the industry.
- Food bloggers have a responsibility to present factual nutritional information and not intentionally mislead consumers, especially because the American public
